Benefits Of Ceramic Coating:

ASSI StaySharp® Ceramic Coated SuperCut Scissors offer the most precise and longest lasting cutting edge.

- **Surface Hardness:** Ceramic Coated Instruments reach a hardness (82 HRC) that is 4-6 times higher than a Tungsten Carbide Scissor
- **Anti-Glare Surface:** Special coating minimizes any reflection on the surface of the instrument.
- **Micro-Smooth Surface:** The Micro-Smooth Ceramic Coating provides a surface that resists corrosion. Also minimized friction means less wear and tear. It is nearly impossible to penetrate the coating because there is a physical and chemical bonding to the raw material.
- **Tissue Compatibility:** Ceramics have been used in the manufacture of implants for years. It is proven to be biocompatible. The coating develops a barrier and has a non-allergenic function.
- **Less Maintenance:** Ceramic Coated Instruments are more resilient to the pressures of daily use and chemical processing.
